Use of Cattle Legally Imported from Canada within the EV Program for the Republic of Korea

August 29, 2006

The information below clarifies the eligibility of cattle legally imported from Canada within the EV Program for the Republic of Korea. The requirements must be addressed within a slaughter facility's documented QSA-EV Program for the Republic of Korea.

Facilities that receive Canadian cattle for slaughter, either for direct slaughter or from a feedlot, must include a segregation process in their approved QSA-EV Program for the Republic of Korea to ensure that Canadian beef carcasses are excluded from eligible product intended for export to the Republic of Korea.
